PROFESSIONAL SUMMARY

Backend Software Engineer with 2+ years of experience at HCLTech, building scalable microservices and RESTful APIs using Java and Spring Boot. Proficient in iBatis, MySQL, and Agile methodologies. Proactively led AI initiatives using Claude Agent SDK and prompt engineering to automate engineering workflows and improve SDLC efficiency. Passionate about clean backend architecture, continuous improvement, and leveraging AI to accelerate software delivery.

WORK EXPERIENCE

HCLTech — Software Engineer

December 2023 – Present

Bengaluru, India | Backend Engineering | Java · Spring Boot · REST APIs · iBatis · MySQL · Git · JUnit

- Designed and developed RESTful microservices using Java and Spring Boot, enabling modular, scalable, and independently deployable backend components for enterprise clients.
- Built and maintained robust API integrations using iBatis for data persistence and MySQL for relational data management, ensuring data consistency and high availability.
- Led AI initiatives within the team by integrating Claude Agent SDK into internal development workflows, automating repetitive engineering tasks and measurably improving SDLC efficiency.
- Applied prompt engineering to build AI-assisted tooling for code review, documentation generation, and requirement analysis — reducing manual effort across sprint cycles.
- Participated in all Agile SDLC phases — sprint planning, daily standups, and retrospectives — consistently delivering features on schedule.
- Wrote and maintained JUnit test cases for microservices, improving code quality and reducing regression defects across releases.
- Collaborated with cross-functional teams through pull requests and code reviews on GitHub, maintaining clean and well-documented codebases.
- Leveraged Postman for API testing and validation, ensuring all endpoints met functional and performance benchmarks before deployment.
- Improved performance of existing services by optimizing SQL queries and refactoring business logic in Spring Boot service layers.

TECHNICAL SKILLS

Languages: Java (Primary), Python, C

Backend: Spring Boot, REST APIs, iBatis, JUnit, Microservices Architecture

Frontend: React.js, Angular.js

Databases: MySQL

Cloud: AWS (Certified), Google Cloud for AI

AI & LLM: Claude Agent SDK, Prompt Engineering

DevOps & Tools: Git, GitHub, Postman, Linux

Methodology: Agile / Scrum

Domain: Cybersecurity

PROJECTS

Fake News Detection using NLP & Reinforcement Learning

Technologies: Python · NLP · Reinforcement Learning

- Developed a binary classification system to detect TRUE vs FAKE news articles using NLP preprocessing pipelines and Reinforcement Learning algorithms.
- Benchmarked multiple classification algorithms, generating accuracy and performance metrics to identify the best-performing model.
- Demonstrated applied expertise in NLP pipelines, and AI-driven content verification — skills directly applicable to production AI tooling.

Capillus Pin Bends — Road Safety IoT System Hackathon Project

Technologies: IoT · Embedded Systems · Sensor Integration · Real-Time Processing

- Designed an IoT-based early warning system targeting road accidents at sharp pin bends, using real-time vehicle detection sensors to trigger safety alerts.
- Built a signaling mechanism integrated with embedded hardware to warn oncoming drivers approaching blind curves, demonstrating end-to-end IoT problem-solving.
- Presented at a hackathon — a hands-on demonstration of applying emerging technology to a critical real-world infrastructure safety challenge.

EDUCATION

Bachelor of Technology — Computer Science & Engineering

August 2019 – April 2023

KKR & KSR Institute of Technology and Sciences

Intermediate — Physics, Chemistry & Mathematics (PCM)

Completed 2019

Sri Chaitanya Junior College

CERTIFICATIONS

Global Certification in Cybersecurity Palo Alto Networks

2022

AWS Academy Cloud Foundations Amazon Web Services (AWS)

2022

Python for Data Science IBM

2021

Programming using HTML and CSS Microsoft Technology Associate (MTA)

2021
